

Putting Performance Measurement to Work

This interactive, learn-as-you-do software package includes all the information and features to guide you through the complex process of developing performance measures.

For optimal results in your improvement efforts, the introduction of new performance measures needs to go

hand-in-hand with the introduction of new manufacturing techniques. After all, how can your company know excellence if you don't have measures? Creating meaningful performance measures that reflect strategic objectives, drive improvement planning, and monitor progress is a big job without a road map. Putting Performance Measurement to Work: An Action Learning Software Kit guides you and records your progress through nine stages of planning, implementation, and evaluation. This interactive, learn-as-you-do software package includes all the information and features to guide you through the complex process of developing performance measures. You choose the area of improvement to focus on, determine the improvements, set the targets, and put them in place. This multimedia learning kit makes it easy. It will teach you, coach you, help you determine your goals, and lead you to success. It records your answers and tracks your progress while the built-in templates organize, save, and analyze your data. And there are no limits to the number of people you can involve in your performance measurement project. Whether your company has two, two hundred, or two thousand employees, all users can benefit from Putting Performance Measurement to Work.

HERE'S WHAT YOU'LL GET: The software module contains worksheets and templates drawn from Brian Maskell's years of consulting and training for world class manufacturing. But this extraordinary software is just one part of this package. The change management workbook and reference guide that accompany the software are loaded with worksheets, tables, lists, and instructions to help you prepare for and roll out the new performance measures. We've also given you a reference copy of Maskell's Performance Measurement for World Class Manufacturing, the source material for the software, and five copies of New Performance Measures, a condensed version of the larger source text. Finally, we give you a color road map to the kit to facilitate your learning.

This Action Learning Software Kit will help you:

- Assess your organization's readiness for change
- Support your organization through the change to a new performance measurement system
- Manage all aspects of your performance measurement project
- Create a schedule for your project using the Gantt chart capability
- Develop a strategic plan for your organization, including strategic measurements
- Create operational measurements in every unit of your organization
- Design charts for your measurements with 35 Microsoft Excel templates
- Evaluate your project implementation

Special Features:

- Assessment document helps you evaluate your organization's readiness.
- Change Management Workbook sets the stage for change and guides you through the process of creating performance measures.
- Step-by-step methodology guides you systematically from planning through evaluation.
- Smart Help? System provides immediate access to context-specific support information wherever you are working in the program.
- Interactive program asks you the questions. You give it the answers; it gives you the results.
- Spreadsheet templates give you a method and a place for tracking and reporting your measures.
- Dynamic graphics and versatile menu features make it simple to navigate through the program as you work.

Included in Package:
